

To be able to play your .wmv files easily in Smart's Video Recorder, you need to tell your computer to associate .wmv files with the Recorder. To do this,

- 1 Locate your video in the folder on your computer.
- 2 Right click and open the drop down window as shown here. Click on **Open with**.
- 3 Select **Choose Program**.
- 4 Choose the Smart Video Player (if you don't see it, choose browse and look for Smart Notebook and then Video Player).
- 5 Make sure to check the box under the window so it will continue to open in Smart Video Recorder after you do all this work!

Now, you can put your .wmv file in your attachments and link to it from your Smart Notebook file and it will play in the Smart Video Player.
